The goals of these areas are to understand and interpret the motion of complex objects that can be found in sequences of images in the real world. The main topics considered as priority are: geometric and physical deformable models, motion analysis, articulated models and animation, modelling and visualization of deformable models, deformable model applications, motion analysis applications, single or multiple human motion analysis and synthesis, face modelling, tracking, recovering and recognition models, virtual and augmented reality, haptics devices, biometrics techniques.
