

The Plant Disease Bulletin Supplement Volume 14-25

By United States. Bureau Industry

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 360 pages. Dimensions: 9.7in. x 7.4in. x 0.8in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1921 edition. Excerpt: . . . April 30 Harper County Oregon March Edenbower The following valuable observations were reported by the Section of Plant Pathology of the Minnesota Experiment Station: Apothecia first found April 15. First infection on plum twigs May 29, Chisago County. Blossom blight was serious. The dry weather seemed to check the disease and not much was found after the latter part of July. (Stakman). In Oregon, Barss reported that the dry summer and picking season lessened the amount of brown rot, and that the losses were lower than in 1920, when constant rain through September cracked the prune fruit and favored infection. Self-boiled lime sulphur and atomic sulphur held brown rot in check on plums in Georgia, according to hmClintock; and in Michigan, Dutton of the Department of Horticulture, Michigan Agricultural College, secured improved keeping quality of harvested plums by dusting the fruit, with sulphur about...
