Computed Examples. Volume 5., provides whimsical scenarios for which a cosmic deep future time Human civilization may harness the awesome power of quasars to power virtual light-speed spacecraft. The image of the airline terminal displayed on the front cover is symbolic of my hopes and dreams that launching of interstellar and intergalactic spacecraft will at some point be a routine process. Regardless of the gamma factor achieved or the class of quasar employed, the quasar accelerator method may be deployed along with a relativistic Lorentz turning force to enable a spacecraft to undergo a stellar cyclor motion to minimize thrust vectoring input energy. Additionally, relativistic rockets, electrical rockets, electrodynamic-hydrodynamic-plasma-drives, magnetic-plasma-bottle-propulsion, linear induction power, and a host of other modes can be operated alongside the pull-sail feature. This book makes a clearly compelling case for the underlying physics of the proposed scenarios using simple high school algebra. None-the-less, the book involves a simple but very detailed mathematical treatment of the subject. Enjoy the read. Jim.
